

React- Day -10: Axios:

fetch() or Axios

fetch(): Built-in function, so you **don't need to install any additional libraries**.

It returns Promises, making it easy to work with asynchronous code.

compared to Axios, it is difficult to handle different HTTP methods, headers, and error handling.

Axios:

Additional dependency, You need to **install Axios** as a separate dependency.

Axios is a larger library compared to fetch()

Implementing simple CRUD - Task-oriented programs
